

MOMENTIVE TO INTRODUCE COATOSIL* FLX COATING MODIFIER AT EUROPEAN COATINGS SHOW

WATERFORD, N.Y. (April 15, 2015) – Momentive Performance Materials Inc. (Momentive) will introduce CoatOSil FLX coating modifier at the European Coatings Show (ECS) April 21-23 in Nuremburg, Germany. This new modifier can improve the flexibility of a final coating system without the anticipated negative impacts to UV and corrosion resistance.

CoatOSil FLX is a resin modifier developed for use in coating systems that employ a silane/cure, including dual curing hybrids. It is compatible with a range of organic resin systems and pigments. CoatOSil FLX is an excellent candidate to consider for coating applications in the industrial maintenance, automotive and coil coating industries. In addition to improved coating flexibility, product benefits typically include improved gloss retention and corrosion performance under harsh weather conditions.

Representatives from Momentive will be demonstrating the benefits of CoatOSil FLX as well as an array of products from their coatings line at Booth #7A-216. For additional information, visit www.momentive.com.

About the Company

Momentive Performance Materials Inc. is a global leader in silicones and advanced materials, with a 75-year heritage of being first to market with performance applications for major industries that support and improve everyday life. The Company delivers science-based solutions by linking custom technology platforms to opportunities for customers. Momentive Performance Materials Inc. is an indirect wholly-owned subsidiary of MPM Holdings Inc. Additional information about Momentive and its products is available at www.momentive.com.
